

## LAPORAN KEGIATAN WFH Ruly Pranajaya Paramita, S.Kom

### IMPLEMENTASI DAN SISTEM PELAPORAN APLIKASI WFH TAHAP 1

1. Membuat Modul laporan wfh **view index.php** :

Menampilkan tombol laporan wfh.

```
<button type="button" class="btn btn-  
primary setuju" onclick="laporan()"> <i class="fa fa-file-  
pdf"></i> Laporan WFH</button>
```

2. Membuat Modul laporan wfh **Controller Approval.php** :

Memproses pengambilan data laporan wfh, dan men-generate laporan wfh berupa file pdf.

```
public function laporan_pilihan()  
{  
    $id_wfh = explode(',', $this->input->post('id_wfh'));  
    $this->load->library('M_pdf');  
    foreach ($id_wfh as $key => $value) {  
        $where['id_wfh'] = $value;  
        $data['data'] = $this->remun->laporan_wfh($where);  
        $laporan = $this->load->view('approval/laporan.php', $data, TRUE);  
        $pdf = $this->m_pdf->load();  
  
        $pdf->AddpageByArray(array(  
            'orientation' => 'P',  
            'mgl' => '15',  
            'mgb' => '15',  
            'mgr' => '15',  
            'mgt' => '15',  
            'mgh' => '10',  
            'mgf' => '10',  
            'newformat' => array(210, 330)  
        ));  
        $pdf->WriteHTML($laporan);  
    }  
    $pdf->Output('laporan', "I");  
}
```

3. Membuat Modul laporan wfh **fungsi laporan wfh** :

Fungsi untuk me-request laporan wfh ke server.

```
function laporan() {  
    let id = [];  
    $.each($("#id_selected:checked"), function() {
```

```

        id.push($(this).val());
    });
    if (id != '') {
        Swal.showLoading();
        let xhr = new XMLHttpRequest();
        xhr.open("POST", "<?php echo base_url('Approval/laporan_pi
        lihan') ?>");
        xhr.setRequestHeader("Content-Type", "application/x-www-
        form-urlencoded");
        xhr.responseType = 'blob';

        xhr.onreadystatechange = function() {
            if (this.readyState == 4 && this.status == 200) {
                var fileURL = window.URL.createObjectURL(this.resp
                onse);

                var a = document.createElement("a");
                a.setAttribute("target", "_blank");
                a.href = fileURL;
                a.show = "Laporan Harian WFH.pdf";

                document.body.appendChild(a);
                a.click();
                Swal.fire('Download Berhasil', '', 'success');
                a.parentNode.removeChild(a);

            }
        }

        var request_params = 'id_wfh=' + id;
        xhr.send(request_params);
    } else {
        swal.fire('Pilih Salah Satu!', '', 'info');
    }
}

```

#### 4. Membuat Modul laporan wfh **Model Remun\_m.php** :

Query pengambilan data laporan wfh.

```

public function laporan_wfh($where)
{
    $sql = "SELECT B.nama_pegawai, B.nip2, DATE_FORMAT(A.tgl_absen,'%d
    -%m-
    %Y') AS tgl_absen, A.jam_absen_hadir, A.jam_absen_pertengahan, A.jam_absen
    _pulang, COALESCE(C.uraihan_kegiatan,'') AS uraihan_kegiatan, COALESCE(A.dem
    am,'') AS demam, COALESCE(A.sesak,'') AS sesak, COALESCE(A.batuk,'') AS ba

```

```

tuk, COALESCE(A.nyeri_nelan, '') AS nyeri_nelan, A.nilai_kinerja, A.catatan
, COALESCE((SELECT D.nama_pegawai FROM pegawai D WHERE D.nip=A.approved_by), '') AS penilai, COALESCE((SELECT E.nip2 FROM pegawai E WHERE E.nip=A.approved_by), '') AS nip
FROM ref_wfh A
INNER JOIN pegawai B ON A.id_pegawai = B.nip
LEFT JOIN tr_log_wfh C ON A.id_wfh = C.id_wfh
WHERE A.id_wfh = ?";
$query = $this->db->query($sql, $where);

return $query->result_array();
}

```

5. Membuat Modul rekap kepegawaian wfh **Model Remun\_m.php** :

Query pengambilan data laporan kepegawaian wfh.

```

public function rekap_kepegawaian($where)
{
    $sql = "SELECT COALESCE(B.nip2,B.nik) AS id, B.nama_pegawai, A.tgl_absen, A.jam_absen_hadir, A.jam_absen_pertengahan, A.jam_absen_pulang, A.nilai_kinerja, (SELECT C.nama_pegawai FROM pegawai C WHERE C.nip = ?) AS penilai, (SELECT D.nip2 FROM pegawai D WHERE D.nip = ?) AS nip
FROM ref_wfh A
INNER JOIN pegawai B ON B.nip = A.id_pegawai
WHERE DATE_FORMAT(A.tgl_absen, '%d-%m-%Y') BETWEEN ? AND ?";
$query = $this->db->query($sql, $where);

return $query->result_array();
}

```

6. Membuat Modul laporan wfh **View laporan.php**

Tampilan laporan wfh berupa pdf.

```

<link href="<?php echo base_url('assets/css/mpdfstyletables.css'); ?>" rel="stylesheet">
<table border="0" style="font-family: arial; width: 1350px;" class="tallcells">
<tr>
<td style="text-align: center; border-right: none; border-bottom: none; border-left: none; border-top: none; width: 290px;">
<img src='<?php echo base_url("assets/images/BBKPM LOGO.png"); ?>' style="width: 100px; height: 100px;">
</td>
<td colspan="3" style="text-align: center; vertical-align: middle; font-size: 26pt; font-weight: bold; border-

```

```
